

1. Automatic and complete compliance checking of every field, form and event

2. Teacher-friendly, color-coded paper-like forms

3. 100% web-based anywhere, anytime access

4. Daily, automatic, bidirectional integration with student information system (SIS)

5. Complete services tracking for audit-defensible Medicaid billing recovery

6. Multi-tiered, configurable goals and objectives banks

7. Special education process-driven, not computer-driven

8. An "all-in-one" solution for managing special populations

9. Implementation success

10. Professional Development training for IEP teams

The ENCORE! suite of products serves districts with enrollments of 250 through 250,000 students. Designed specifically for the K-12 education market, ENCORE! serves as a foundation for managing all phases of the IEP process for special populations. Read more to learn why ENCORE! is **the** best solution for your district.

1. Automatic and complete compliance checking of every field, form and event

- 100% compliant IEPs
- Keeps district compliant with federal and state law
- Saves thousands of hours (and dollars) spent each year in manual compliance reviews and error correction
- Reduces the impact of teacher turnover

2. Teacher-friendly, color-coded paper-like forms

- Forms are familiar and easy to learn, resulting in faster productivity gains
- Substantial time savings on paperwork
- Even new special education teachers can complete forms with 100% accuracy
- Teachers can work collaboratively on forms for a single student to ensure better, student-focused decisions based on the most current information

3. 100% web-based anywhere, anytime access

- Teachers can work from home, and outside evaluators or service providers can access data for students in their caseload, eliminating copying or passing of student folders and ensuring that decisions are based on the most current information
- Student support teams can work collaboratively on student IEPs or evaluations to ensure better, student-focused decisions based on the most current information
- IT staff does not have to update user workstations for software updates, so new capabilities can easily be added

4. Daily, automatic, bidirectional integration with student information system (SIS)

- Student data pre-fills on forms, reducing data entry time
- Students can be moved easily between general ed and special ed status as needed, complete with all demographic and academic history
- Teachers can easily access both general ed and special ed student histories (particularly important for students with interventions prior to referral)
- Student mobility is easier to track and child counts are more accurate
- Mass student grade changes (such as for promotions) are handled automatically, eliminating the need to make changes manually or to run a separate rollover program

5. Complete services tracking for audit-defensible Medicaid billing recovery

- Features a complete and audit-defensible trail from IEP to service ticket to claim, all in one integrated system
- Recovers more money for the district by eliminating 3rd-party recovery fees
- Recovers more money for the district by significantly improving claims accuracy

6. Multi-tiered, configurable goals and objectives banks

- Provides the flexibility to utilize multiple goal banks from different sources
- Goal banks can be set up by subject area/grade/category for easier selection
- Teachers can add personal goals or modify existing ones to tailor goals to meet their specific student needs
- Goals and objectives feed automatically to both progress reports and service tickets (for Medicaid billing), saving data entry time

7. Special education process-driven, not computer-driven

- Automatically tracks and displays all upcoming meetings to ensure compliance
- Automatically assembles forms for teachers, saving time and preventing errors
- Automatically schedules future events within required timelines, saving time and preventing errors
- Presents a visible “to-do” list (Quick Links) that includes all students in the teacher’s caseload or all students in the school or district, so educators can quickly determine what is due without having to look through each student’s folder one at a time

8. An “all-in-one” solution for managing special populations

- The Intervention module collects, tracks, and reports on all data for pre-referral programs, including Response to Intervention (RTI)
- ELL and 504 modules collect, track, and report on data for students with English language learner or 504 plans
- All modules seamlessly integrate with ENCORE! Special Education to eliminate redundant data entry and provide a comprehensive student view

9. Implementation success

- Spectrum K12’s proven, repeatable process, expertise and experience implementing ENCORE! minimizes the time to “go live” with the system
- Successful installations of ENCORE!, from districts with fewer than 250 to those with more than 250,000 students
- Post-implementation support ensures continued client success with the solution

10. Professional development training for IEP teams

- Trainings provide educators with the skills, tools and structure to facilitate meeting participation, process/information management, and decision-making so that meetings are productive and focused on the needs of the child
- Courses are taught specifically for educators, by educators who are experts in special education and in team dynamics
- Trainings are based on proven techniques for leading meetings, building consensus, and eliminating conflicts

About Spectrum K12

Spectrum K12 School Solutions Inc. helps school districts more effectively manage the individualized learning process for all students receiving special services or interventions. Spectrum K12 works collaboratively with districts of all sizes to deliver scalable, easy-to-use software solutions that lift the burden of paperwork from education professionals so they can focus on the most important part of their work: educating children and improving student achievement.
